Molecular cloning and characterization of a novel carboxylesterase-
like protein that is physiologically present at high concentrations in
the urine of domestic cats (Felis catus).";

Biochem. J. 370:101-110(2003).

1- SIMILARITY: Belongs to the type-B carboxylesterase/lipase family.

"Molecular cloning and sequencing of thioesterase B gene associated wit stimulation of expression of the thioesterase B gene associated wit hormonal induction of peroxisome proliferation.";

J. Biol. Chem. 268:14278-14284(1993).

-I-FUNCTION: Fatty acid biosynthesis chain termination and release the free fatty acid product is achieved by hydrolysis of the the seter by a thioesterase. This thioesterase may be associated wit peroxisome proliferation and may play a role in the production alphydroxy fatty acid diester pheromones.

-I-TISSUE SPECIFICITY: Highest levels in uropygial gland, much low
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        PIR; A47162; A47162.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
